

# VIPER COIL HEATER STANDARD FEATURES

- Internal Type J and Type K thermocouples are available for precise temperature control.
- .130 square cross section is standard. Other cross sections are available.
- Other lead arrangements are available.

## LEAD ORIENTATIONS

## LEAD PROTECTION

Four styles of lead protection are available. **Stainless steel braid lead protection is standard.**

Stainless steel overbraid provides excellent protection while also remaining flexible.

Stainless steel flexible conduit provides outstanding protection.

Silicon rubber impregnated fiberglass sleeving for moisture resistance.

Teflon leads provide the most flexibility and can fit in tight places.

The junction area for all lead styles should be kept below 500° F.
